WORK EXPERIENCE

Senior Software Engineer Wipro Technology

05/2018 - Present

Tasks

- Supported in the development and deployment of a web application to AWS for processing resumes end to end which in turn reduced the processing time up to 40-50%.
- Participated in developing another web application which will parse the grievance form with in 1 minute and collect the factual events that would have caused it.
- Developed a predictive solution which classifies a complaint form as product complaint or an adverse event , with a 88% correctness.
- Conceptualized and implemented a predictive model to detect the presence of barcodes from the images which lessened the processing time up to 1.5 hour for an analyst
- Devised a named-entity recognition model to label the entity from the given sentences with a 92% accuracy.
- Pioneered development of a multi-class classification model to evaluate the seriousness pattern from the patient's complaints which will signify the level of impact.
- Curated an intelligent dashboard(BI report) that provides different insights based on the data collected from different sources within 4 months.
- Developed a conversational skill based on Alexa to guide the lab analysts on hazardous spills.
